

WHAT HAPPENS WHEN WE ALLOW

GLUTATHIONE LEVELS TO BECOME LOW?

The Bad News ... Your glutathione levels are FALLING, by about 10% to 15% per decade!

Reduced glutathione levels result in accelerated aging, low energy, higher inflammation, and a greater vulnerability to cell damage and disease

The Good News: Max GXL has been shown in double blind, placebo crossover studies to increase intracellular glutathione levels by **276%** on average over a 60 day period.

This product does NOT cure or treat any disease or illness. It simply gives your cells the nutrients they need to produce more glutathione, which in turn helps every cell function better.
